DETAILED ACTION

1. A response was received on 23 December 2008. By this response, Claims 1 and 9 have been amended. Claims 2 and 3 have been canceled. No new claims have been added. Claims 1, 4-7, and 9-14 are currently pending in the present application.

Allowable Subject Matter

2. Claims 1, 4-7, and 9-14 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Independent Claim 1 is directed to a method in which a client stores a first certificate and a URI associated with the first certificate, provides the URI and a second certificate to a third party, and determines whether the third party is to be delegated the ability to use the first certificate, and, if so, the client provides the first certificate from the client to an authorizer in response to the authorizer accessing the URI (received from the third party), and if not, the client withholds the first certificate from the authorizer, whereby the client retains control over the third party's use of the certificate, and where the third party's delegated ability is permissible upon the authorizer having received the second certificate from the third party and the first certificate from the client.

Independent Claim 9 is directed to a corresponding method in which a client receives a first certificate from an authorizer, generates a URI associated with the first certificate and a third party, and provides the URI and a second certificate to the third party, and

when the third party provides the URI and second certificate to the authorizer and the authorizer accesses the URI, the client provides the first certificate to the authorizer, where the third party's delegated ability is permissible upon the authorizer having received the second certificate from the third party and the first certificate from the client. The closest prior art, McGarvey and Lipkin, discloses methods in which a third party's delegated ability to use a certificate is controlled by a client, where the client provides a certificate if the ability is authorized and the client does not provide the certificate if the delegation is not authorized, and further discloses that certificates can be provided between the authorizer and client without interaction with the third party. However, McGarvey and Lipkin, alone or in combination, do not teach or suggest the specific uses of the first and second certificates in combination with the URI as now claimed, for example, that the third party's delegated ability is permissible upon the authorizer receiving the second certificate from the third party and the first certificate from the client. Therefore, the claims are allowable over the cited prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. Kall et al, US Patent 7418256 and WIPO Publication WO02/054808, discloses a system that includes sending a URI in place of a certificate and a third part accessing the URI.
- b. Goland, US Patent 7500104, discloses a system for secure interaction that includes delegation assertions and certificates.
- c. Aura, "On the Structure of Delegation Networks" (two publications), generally discloses a formalization of delegation networks for the delegation of access rights using certificates.
